

OUR SUSTAINABLE PROCUREMENT POLICY

As the **HOTEL ANATOLIA** family, our aim is to implement the principles of sustainability in procurement in order to minimize the negative impact of our services on the environment and society, while contributing positively to both.

- We prioritize the **purchase of energy-efficient and environmentally friendly equipment, services, and products**, and strive to minimize unnecessary purchases. This approach results in **lower energy consumption and maximum environmental and economic benefit**.
- In our supplier selection processes, we give preference to businesses that are **located near our hotel**, operate in harmony with the environment, hold **environmental certifications**, and demonstrate strong environmental and social performance.
- We prefer products that are **recycled**, **reusable**, and **minimize the use of plastic packaging** in all procurement activities.
- During service procurement, we **prioritize working with local businesses** rather than multinational corporations whenever possible.
- Unless otherwise necessary, we favor locally manufactured or produced goods over imported products.
- When acquiring machinery and equipment, we research and prefer Class A or energy-saving alternatives.
- While procuring goods and raw materials such as **construction materials, textiles, chemicals, food, beverages, and consumables**, we assess products and supplier companies based on their **sustainability practices and certifications**.
- We actively **share our sustainability practices with our suppliers and subcontractors**, fostering transparency and mutual commitment to sustainable development.
