

## ENERGY CONSUMPTION POLICY

As HOTEL ANATOLIA, we are aware of the importance and necessity of energy in today's technology-driven world. In the service industry, providing essential amenities such as: heating and cooling systems, hot water supply and spa facilities, electronic devices for entertainment or decorative purposes, is crucial to ensuring guest comfort and satisfaction.

From a tourism perspective, these services are considered key factors that attract both domestic and international travelers.

However, providing these amenities also leads to considerable energy consumption.

As HOTEL ANATOLIA, we are committed to protecting our planet from potential threats by using energy efficiently and setting clear goals to reduce our consumption.

We aim to minimize our energy usage by: Monitoring and reporting our monthly consumption of natural gas, electricity, and water, Reducing our total consumption volume, Calculating monthly usage per guest based on occupancy, And raising awareness among our guests about the importance of energy conservation.

Our goal is to continue delivering high-quality service while protecting natural resources and contributing to a more sustainable future.
